

# **303 relay - Safety critical, 19 contacts** Datasheet

## Description

The 303 relay has 19 double break contacts in all N/O and N/C combinations.

The plug-in design offers secure locking feature for maximum ease of maintenance (no wires need to be disconnected or other hardware removed for relay inspection or replacement). The resistance to impact and vibration is conform to standards in force for Railway Transported Equipment.

Positive mechanical keying of relay to socket is built into relay and socket during manufacture and terminal identifications are clearly marked on identification plate that is permanently attached to the relay. Weld no transfer safety contacts are standard. If one N/O contact welds, no N/C contact can close and visa versa. All relays are factory tested to insure they meet this important safety requirement.

The 303 relay can be plugged in the COR NK or COR PA socket.

#### Application

The 303 relay is designed for general purpose such as lighting, pumps and fans, offering as standard a weld no transfer design for safety critical applications such as door control, emergency brake failure, interlocking traction and breaking. Optional gold contact are possible for dry circuit applications or silver and gold contacts combined for mixed load applications.

#### Features

- Instantaneous relay
- Plug-in design with secure locking feature for maximum ease of maintenance
- 19 double break contacts in all N/O and N/C combinations
- Weld no transfer safety contacts standard
- Optional gold contacts
- Optional gold bifurcated and silver contacts
- Contact life (mechanical) of 100 million cycles
- -40 °C...+80 °C operating temperature

#### Benefits

- Proven reliable
- Long life cycle
- Easy to maintain and replace
- Low life cycle cost
- No maintenance

#### Railway compliancy

- NF F 62-002 Rolling stock -Instantaneous relays contacts and sockets
- NF F16-101/102 Fire behaviour -Railway rolling stock
- Relay has been approved to go on the English/French train channel shuttle

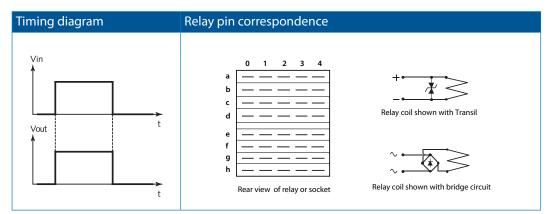

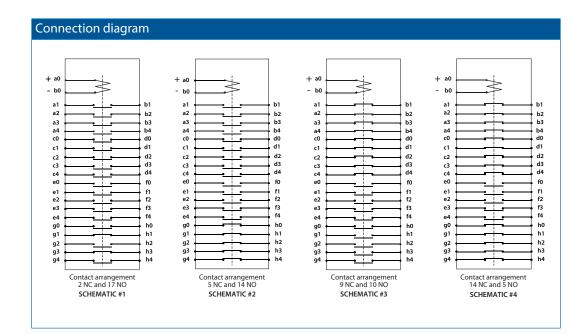

## Functional and connection diagrams

### Coil data - DC versions

Unom (VDC)	Uoperating (VDC)	Pnom (W)	Uhold <sup>(1)</sup> (VDC)	Udrop-out <sup>(2)</sup> (VDC)	R coil (Ω) <sup>(3)</sup>	L/R (ms) <sup>(4)</sup>
24	16 / 33	4.8	13.5	2.5	120	25
36	25 / 45	4.8	21	3.5	270	25
48	33.5 / 60	4.6	28.5	4.5	500	25
72	48 / 90	5.2	40.5	6.5	1000	25
110	77/138	5.0	60	11.5	2400	25

(1) Minimum assured value (2) Maximum assured value

(3) Coil resistance tol.: ± 8% at 20 °C (4) Valid for closed relay.

Note:

Based on the contact configuration, the characteristic of the relay can be changed.

### Coil data - AC versions

Unom (VAC)	Uoperating (VAC)	Pnom (VA)	Uhold <sup>(1)</sup> (VAC)	Udrop-out <sup>(2)</sup> (VAC)	R coil (Ω) <sup>(3)</sup>	L/R (ms) <sup>(4)</sup>
220	176 / 242	4	129	21	12000	-

(1) Minimum assured value

(3) Coil resistance tol.: ± 8% at 20 °C

(2) Maximum assured value (4) Valid for closed relay.

### Contact data - standard (silver contacts)

Nominal current	8 A resistive			
Nominal breaking capacity and life	2.4 A at 72 VDC	L/R : 0 ms	Electrical life: 5 x 10 <sup>6</sup> op.	
	0.8 A at 72 VDC	L/R: 30 ms	Electrical life: 2 x 10 <sup>6</sup> op.	
	2.4 A at 220 VAC 60 Hz	cos Ø=1	Electrical life: 2 x 10 <sup>6</sup> op.	
	Lamp filament circuit: 160 W at	: 72 VDC	Electrical life: 5 x 10 <sup>5</sup> op.	
Contact overload withstand	At 24 VDC: 160 A at L/R = 0 fc	or 10 ms		
	(10 operations at the rate of 1 op	peration per n	ninute)	
Contact closure pick-up time	< 60 ms			
Contact opening drop-out time	< 30 ms			
Minimum contact continuity	20 mA at 24 VDC			
Number of contacts	19 double break contacts (form X & Y)			
Contact material	Hard silver overlay laminated to	copper		
Contact resistance initial	$10 \text{ m}\Omega$ max at 8 A			
end of life	$40 \text{ m}\Omega$ max at 8 A			

## Contact data - dry circuit application (gold contacts)

Contact design	Stationary contacts	Bifurcated 2 contact finger design with wiping action to assure lowest contact resistance and endurance
	Movable contacts	Solid blade
Contact resistance	$\leq 20 \text{ m}\Omega \text{ at } 5 \text{ A (carry only)}$	
Maximum contact ratings	Operating	20 mA maximum at 72 VDC
	Carry only (no make and break)	5 mA maximum at 5 VDC
Minimum current ratings	5 mA at 12 VDC*	
Contact material	Stationary contacts	Solid hard gold or gold plated over hard silver
	Moveable contacts	Hard gold over hard silver overlay laminated
		to copper

 $\ast$  For gold bifurcated contact: minimum currect rating is 1 mA - 5 VDC

### **Electrical characteristics**

Dielectric strength	EN 50155 - 2200 VAC, 1 min
Insulation resistance	$\geq$ 1000 M $\Omega$ at 500 VDC

### Mechanical & environmental characteristics

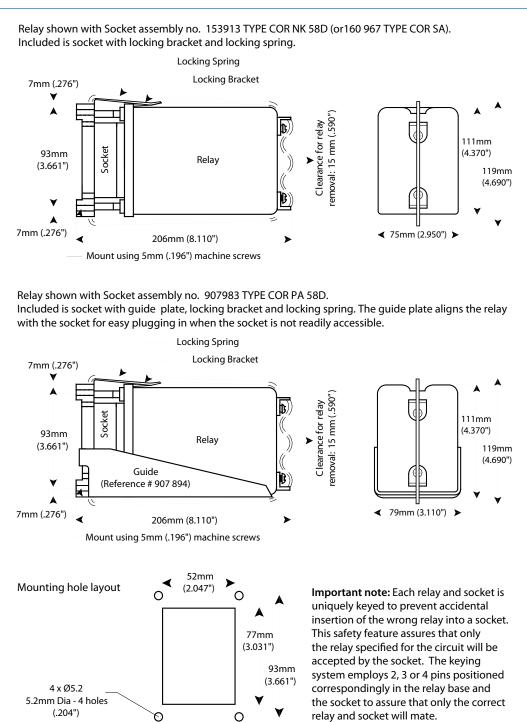

Vibration	NF F 62-002 The tests are conducted in the X, Y , Z planes at frequency between 5 & 50 cycles (sinusoidal) at 1 g
Shock	NF F 62-002 Tests are applied in both directions in the X, Y & Z planes. Then successive shocks are administered consisting of the positive component of sinusoidal with a value of 15 g, 11 ms
	Other vibration and shock tests can be performed on request.
Mechanical life	$> 100 \ge 10^6$ operations
Weight	639 g (22.5 ounces)
Temperature	-40 °C+80 °C
Humidity	93% RH, 40° C for 4 days
Salt mist	5% NaCl, 35° C for 4 days
Protection	IP40 (relay on socket)
Fire & smoke	Materials: Polycarbonate resin (cover) / polyester (base)
	Note: These materials have been tested for fire propagation and smoke emission
	according standards NF F 16-101, NF F 16-102. And have been approved for
	use on the English/French train channel shuttle.

## **Dimensions (mm)**

56mm

## Dynamic relay selection curve No 1

AC Current breaking capacity versus life expectancy in millions of cycles. Rate of contacts opening and closing = 1200 operations per hour. Curves shown for resistive load (Power Factor = 1).

Curve	1	2	3	4
VAC	220	125	48	24

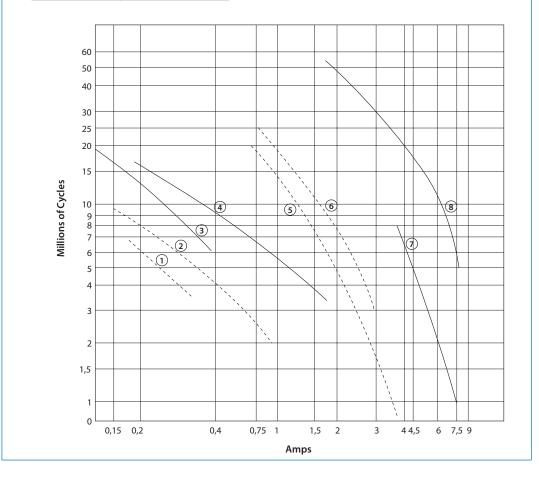

## Dynamic relay selection curve No 2

**DC Current breaking capacity versus life expectancy in millions of cycles.** Rate of contacts opening and closing = 1200 operations per hour. Curves shown for inductive load:

- L/R= 20 ms continuous current ---- L/R= 40 ms continuous current

Curves	1-3	2-4	5-7	6-8
VDC	220	125	48	24

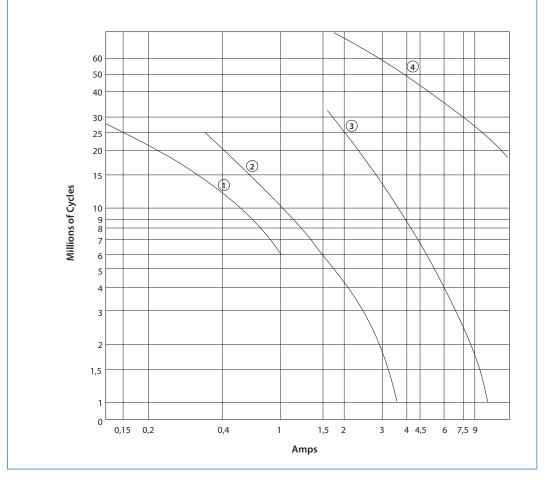

## Dynamic relay selection curve No 3

DC Current breaking capacity versus life expectancy in millions of cycles. Rate of contacts opening and closing = 1200 operations per hour. Curves shown for resistive load (L/R = 0). Continuous current.

Curve	1	2	3	4
VDC	220	125	48	24

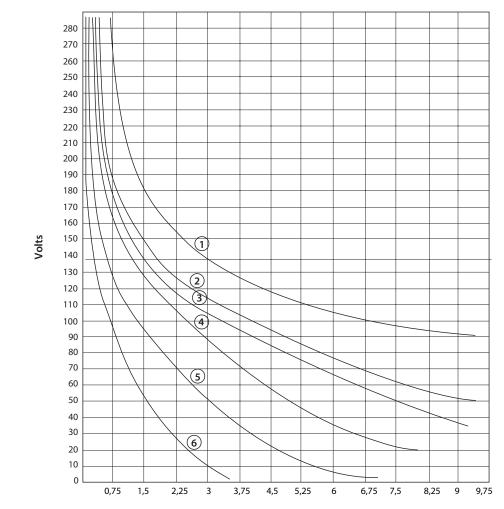

## Dynamic relay selection curve No 4

Maximum contact breaking capacity versus voltage for a given L/R. Rate of contacts opening and closing = 600 operations per hour. Curves shown for resistive load (L/R=0) and inductive loads. Continuous current.

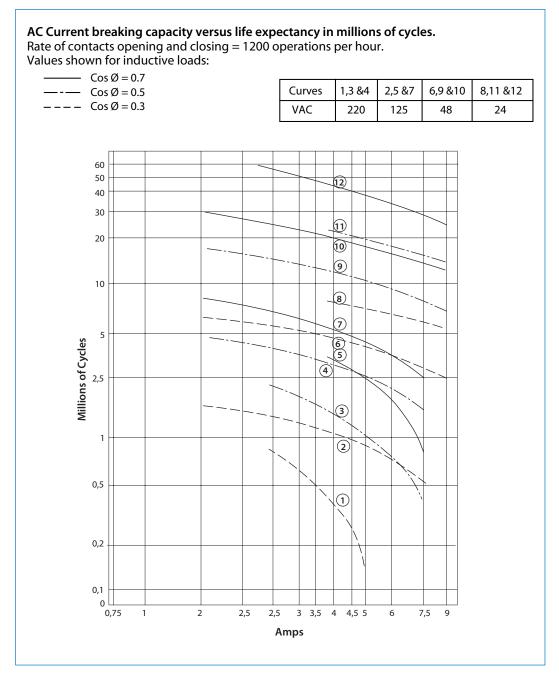

## Dynamic relay selection curve No 5

(for silver contacts)

# **303 relay** Mounting possiblities / sockets

#### Panel/flush mounting

153913	COR NK X*	Socket without guide - Polyester melamine (use with standard relay 303)
907983	COR PA X*	Socket with guide - Polyester melamine (use with standard relay 303)
160967	COR SA	Socket without guide - Polyester melamine (use with relay 303S)

\* X indicates keying code from relay table

# **303 relay** Instructions

#### Installation

Install socket and connect wiring correctly according identification to terminals. Plug relay into socket. Reverse installation into socket not possible due to mechanical blocking by snap-lock.

Don't reverse polarity of coil connection.

Relays can be mounted (tightly) next to each other and in any attitude. However, we recommend the folowing: - If the relay is mounted **vertical**; the direction of contact closure should be oriented transverse to the direction of forward motion.

- If the relay is mounted **horizontal**; the direction of contact closure should be oriented so that gravity will cause the contacts to revert to their de-energised position.

Warning! Never use silicon near by relays

#### Operation

Before operating always apply voltage to coil to check correct operation.

Long term storage may corrode the silver on the relay pins. Just by plugging the relay into the socket, the female bifurcated receivers will automatically clean the corrosion on the pins and guarantee a good connection. Do not use the relay in places with flammable gas as the arc generated from switching could ignite gasses.

#### Maintenance

Correct operation of relay can easily be checked as transparent cover gives good visibility on the moving contacts. When the relay doesn't seem to operate correct, please check presence of coil voltage. Use a multimeter. If LED is used, coil presence should be indicated. If coil voltage is present, but the relay doesn't work, a short circuit of suppression diode is possible (The coil connection was reversed). If relay doesn't work after inspection, please replace relay unit by a similar model. Send defective relay back to manufacturer. Normal wear and tear excluded.

## 303 relay Ordering scheme

Configuration:

This example represents a 303 0 2 17 36 58D S 1

Description: 303 relay, Contact material: hard silver overlay laminated to copper, configuration 2 N/C + 17 N/O with Unom 36 VDC and keying 58D. Transil coil protection and test report in English
