

RoHS Declaration / Statement:

March 2023

Directive 2011/65/EU

Mors Smitt UK - a Division of Wabtec UK Ltd, is committed to the sensible and responsible stewardship of the environment and with this in mind we are continually investigating methods of decreasing the impact of our products on the environment and human health.

We are dedicated to design and build high quality and safe products and have consequently investigated the use of lead-free solder in our products.

However, the technology survey demonstrates that the lead-free solder joints do not provide the desired reliability of our products and as a result we must keep using lead-based solder until a suitable alternative is available.

Our applications for Mors-Smitt products are classified under European Union Directive 2011/65/EU, article 2 sub (d): large-scale stationary industrial tools, sub (e): large-scale fixed installations and (f): means of transport for persons or goods. Used in these applications, our products are exempt from the RoHS directive.

Our stewardship responsibilities also include Mors Smitt UK to manage WEEE requirements in accordance with – The Waste Electrical and Electronic Equipment Regulations 2013 (transpose main provisions of Council Directive 2012/19/EU).
